

YAAD RAKH

Aapka Digital Munshi

WhatsApp-First CRM for Indian Small Businesses

Product	Yaad Rakh — WhatsApp CRM
Version	v1.0 MVP
Built by	Devnddez (Uday Sharma)
Document type	Product Requirements Document (PRD)
Target users	Indian small business owners (non-tech)
Monetization	₹299–₹599/month per business

1. Problem Statement

Indian small business owners — clothing stores, coaching centers, boutiques, CAs, local service providers — are losing customers daily due to poor follow-up. They manage leads through:

- WhatsApp chats they forget to reply to
- A physical diary or notebook
- Memory alone — which always fails

Existing CRM tools (Zoho, HubSpot, Salesforce) are designed for corporate teams. They require logins, dashboards, pipelines, and tech literacy that most Indian SMB owners simply do not have. The result: tools go unused, money is lost.

There is no CRM built specifically for the way Indian small business owners already operate — on WhatsApp, in Hindi/Hinglish, with zero tolerance for complexity.

2. Solution Overview

Yaad Rakh is a WhatsApp-bot-based CRM. No app to download. No login to remember. No dashboard to learn.

The business owner interacts entirely through WhatsApp — the tool they already use 10+ hours a day. They type customer info in plain language, and Yaad Rakh organizes, reminds, and follows up automatically.

Core Value Proposition

- Zero learning curve — works like texting a smart assistant
- Operates on any Android phone (no laptop needed)
- Speaks Hinglish — feels natural to Indian users
- Saves leads in under 10 seconds
- Runs follow-ups automatically without owner effort

3. Target Users

Primary: Indian small business owners with 10–500 customers, sold to via Devnddez agency services.

Feature	What Happens	User Action
Clothing stores	Track walk-in inquiries, follow up on orders, send festival offers	Sharma Ji, Lajpat Nagar
Coaching centers	Track admission inquiries, fee reminders, batch updates	Local tutors, Tier 2/3 cities
Boutiques & tailors	Order tracking, delivery follow-ups, repeat customer outreach	Independent fashion shops
Local service providers	Lead tracking, job status, payment follow-ups	AC repair, plumbers, electricians
CAs and consultants	Client follow-ups, document reminders, payment tracking	Solo practitioners

4. Core Features (MVP)

Feature 1 — Lead Save via Natural Language

The owner types customer info in any format into WhatsApp. GPT-4o-mini parses the message and extracts structured data.

Example input:

"Raj, 98765XXXXX, website banana hai, budget 15k"

Bot auto-extracts: Name = Raj, Phone = 98765XXXXX, Need = website, Budget = ₹15,000

Bot reply:

"Raj save ho gaya! Follow-up kab karein? (e.g., 2 din, 1 hafta)"

- AI parses name, phone, need, budget, and any dates mentioned
- Confirms save with a short summary
- Immediately asks for follow-up timing
- All data stored in PostgreSQL under that business's account

Feature 2 — Bhool Mat Follow-Up Reminders

Owner sets follow-up timing in plain language. System fires a WhatsApp reminder at the right time.

Owner says: "2 din baad"

On day 2, owner gets:

"Yaad hai? Raj ka follow-up aaj karna tha. Budget: ₹15k. Tap karo: wa.me/+9198765XXXXX"

- One tap opens WhatsApp directly with that customer
- Reminder includes context: what they wanted, budget, last interaction
- Owner can reply 'Done', 'Baad mein', or '3 din aur' to reschedule

Feature 3 — Aaj Ka Kaam Morning Digest

Every morning at 9AM, owner receives a summary of the day's pending tasks on WhatsApp — automatically.

Message format:

"Good morning Sharma ji! Aaj ka kaam: ☐ Raj — website follow-up ☐ Priya — ₹3500 pending (8 din se) ☐ Suresh — suit delivery confirm karna"

- Sent daily via cron job (Upstash QStash / Vercel Cron)
- Only shows today's pending reminders and overdue payments
- Owner can reply with lead name to get full details

Feature 4 — Payment Tracker

Owner tracks who owes money by typing naturally.

Owner: "Meena ka 5000 baaki hai"

Owner: "Ramesh ne 3000 diya aaj"

- Bot tracks balance per customer

- Weekly auto-reminder fires for overdue payments:

"Meena ka ₹5000, 15 din se pending. Message bhejein? (Haan/Nahi)"

- If Haan: sends polite Hinglish payment reminder to customer's WhatsApp

Feature 5 — Kaisa Gaya? Deal Pipeline

After each follow-up reminder, bot asks how it went. One-tap reply builds a conversion pipeline automatically.

Bot: "Raj se baat hui? Kaisa gaya?"

[1] Deal pakka ☐ [2] Soch raha hai [3] Nahi chahiye [4] Baad mein

- Owner taps one number to reply — no typing needed
- System updates lead stage accordingly
- Month-end auto-report fires:

*"October Summary: ☐ 32 naye customers ✓14 deals close ☐ ₹8,500 payment pending (3 log)
☐ Last month se 20% zyada ☐*

Feature 6 — Tyohar Bulk Message Sender

Before festivals (Diwali, Eid, Holi, New Year), owner can message all saved customers in one command.

Owner: "Diwali wish bhejo sabko"

- Bot sends personalized message to all contacts: "Happy Diwali [Name] ji! Sharma Garments ki taraf se shubhkamnayein! Naya collection aa gaya hai — zaroor aayein!"
- Owner can also target specific segments: "Sirf jo 3 mahine mein aaye unhe bhejo"
- This single feature alone drives repeat footfall and justifies the subscription

5. Tech Stack

Layer	Technology	Why
WhatsApp Layer	360dialog or Twilio WA API	Affordable for India, supports incoming webhooks
AI / NLP	OpenAI GPT-4o-mini	Parse natural language, cheap per call
Backend	Next.js API Routes	Familiar stack, fast deployment
Database	PostgreSQL + Prisma (Neon)	Same as Saviours AI, already known

Cron / Reminders	Upstash QStash	Serverless cron, reliable and cheap
Hosting	Vercel	Zero-config deployment
Admin Panel	Next.js UI (internal)	Devnddez manages client accounts

6. Database Schema (Simplified)

Five core tables:

- Business — id, name, whatsapp_number, plan, created_at
- Customer — id, business_id, name, phone, need, budget, stage, created_at
- Interaction — id, customer_id, notes, interaction_date, outcome
- Reminder — id, customer_id, due_date, status (pending/done/snoozed), message
- Payment — id, customer_id, amount, status (pending/paid), due_date, notes

Relationships: Business → many Customers → many Interactions, Reminders, Payments

7. Core User Flows

Flow A — New Lead Save

1. Owner sends message to bot WhatsApp number
2. Webhook fires to Next.js /api/whatsapp/incoming
3. GPT-4o-mini parses: name, phone, need, budget
4. Customer saved to DB under business_id
5. Bot replies with confirmation + asks follow-up timing
6. Reminder entry created in DB with due_date

Flow B — Reminder Trigger

7. Cron job runs every hour
8. Fetch all reminders where due_date <= now AND status = pending
9. For each: send WhatsApp message to business owner with customer context + wa.me link
10. Mark reminder as sent, wait for Kaisa Gaya reply

8. MVP Build Roadmap

Feature	What Happens	User Action
---------	--------------	-------------

Week 1	WhatsApp webhook setup + GPT lead parsing + save to DB	Core infra working
Week 2	Follow-up reminder system + cron job setup	Bhool Mat feature live
Week 3	Morning digest + payment tracker	Daily workflow complete
Week 4	Kaisa Gaya pipeline + month-end report	Conversion tracking live
Post-MVP	Tyohar bulk sender + admin dashboard	Viral feature + ops tool

9. Monetization

Free Tier	10 leads, 1 user, basic reminders only
Starter — ₹299/month	Unlimited leads + reminders + payment tracker
Pro — ₹599/month	Everything + Tyohar bulk sender + monthly report
Devnddez onboarding fee	₹500 one-time setup per business (done-for-you)
Revenue model	Agency sells it as an add-on to every web/content client

10. Key API Endpoints

POST /api/whatsapp/incoming	Receives all incoming WhatsApp messages from webhook
POST /api/leads/parse	Sends message text to GPT, returns structured lead data
POST /api/leads/save	Saves parsed lead + creates reminder entry
GET /api/reminders/due	Fetches all reminders due for cron job
POST /api/reminders/send	Sends WhatsApp reminder for each due entry
POST /api/digest/morning	Generates and sends morning digest to all businesses
POST /api/payments/update	Parses payment message and updates balance
POST /api/bulk/send	Sends Tyohar bulk messages to all customers of a business

11. Constraints & Notes

- WhatsApp Business API requires Facebook Business verification — account setup needed before dev starts
- 360dialog is recommended over Twilio for India pricing (~\$0.005/message vs Twilio's higher rates)
- GPT-4o-mini keeps AI costs under ₹0.01 per lead parse — negligible at scale
- All UI for end business owner is WhatsApp only. No web frontend needed for MVP.
- Admin panel (Next.js) is internal only — for Devnddez to onboard and manage client accounts
- Cron job cadence: morning digest at 9AM IST daily, reminder check every 1 hour

Start with these 3 features in Antigravity: (1) Webhook + Lead Parse + Save, (2) Reminder Cron, (3) Morning Digest. These 3 alone make it a sellable product.
